

Portfolio Build

Slightly different format this week

The aims

-To build a responsive portfolio site for your projects. The requirements are that it contains the 3 sections listed below, and is responsive. You can use a mixture of HTML, CSS and Javascript.

It is optional if you want to include sass in your project workflow.

At the end of the week you should be able to put the code on your Github. You should also be able to make the site viewable using Netlify or similar.

This will include:

About me

An about me section:

Your name, and "Web Developer" (or Frontend Developer)

Some things to potentially include:

- Describe your ambitions
- Talk about why you want to be/are a web developer
- Talk about your background
- Talk about your favourite things in tech
- Talk about your hobbies or accomplishments outside of tech
- List your values
- This will help companies find the right team for you.

Projects section

Portfolio: a list of projects

A screenshot/picture

A link to the code (github repo)

- (optional) A link to a codepen and/or github
- A description
- what the project is
- what you did on it
- some of the technologies/skills that it used
- "Time Management Dashboard"
- This was my first project using Tailwind CSS framework, and it involved a lot layout skills such as flexbox and grid. It is completely responsive, and built to designs provided by frontendmentor.io Best moment: Refactoring mobile-first design to desktop size Worst moment: Refactoring mobile-first design to desktop size
